AI System ID: 2d49da46-6bf6-4c93-8ca3-dd5c010293a1
Risk class: HIGH_RISK
Primary article: Annex III Section 4(a)
Generated at: 2026-05-16T23:51:38.250721+00:00

Section 1 - General Description

The bank_cv_ranking_system is an AI system designed to rank curriculum vitae (CVs) for recruitment purposes within a banking context. The system architecture includes a ranking module located at src/recruitment/ranker.py, as evidenced by the repository contents. [GAP - information not available in repository. Provider must document.] Provider information, hardware and software requirements, and the specific market form are not evidenced in the repository.

Section 2 - Intended Purpose

The intended purpose of the bank_cv_ranking_system is to rank CVs for recruitment in a bank using education, employment history, skills, and interview notes. The system evaluates applicants to assist in recruiter review. [GAP - information not available in repository. Provider must document.] Detailed documentation regarding foreseeable misuse and the specific demographic profiles of affected natural persons is missing.

Section 3 - Human Oversight Measures

The system evaluates applicants specifically for recruiter review, indicating a human-in-the-loop oversight mechanism where human recruiters interpret the AI-generated rankings. [GAP - information not available in repository. Provider must document.] Detailed instructions on the capabilities and limitations of the system, as well as specific oversight mechanisms implemented to prevent automation bias by the deployer, are not provided.

Section 4 - Input Data Specifications

The system processes input data consisting of candidate education, employment history, skills, and interview notes. [GAP - information not available in repository. Provider must document.] Specifications regarding training data, validation data, test data, data provenance, and data quality controls are entirely absent from the repository.

Section 5 - Design Specifications

The system's design includes a ranking component implemented in src/recruitment/ranker.py. [GAP - information not available in repository. Provider must document.] Detailed architectural diagrams, key design choices, algorithmic logic, and the classification rationale are not documented in the repository.

Section 6 - Risk Management System

[GAP - information not available in repository. Provider must document.] The repository contains no evidence of a risk management system. Documentation regarding identified risks, risk estimation, and mitigation measures is missing.

Section 7 - Validation and Testing

[GAP - information not available in repository. Provider must document.] There is no evidence of validation and testing procedures in the repository. Test methodology, test datasets, discriminatory bias testing (crucial for Annex III Section 4(a) high-risk systems), and test results are not documented.

Section 8 - Performance Metrics

[GAP - information not available in repository. Provider must document.] The repository lacks documentation on performance metrics. Information regarding system accuracy, robustness, cybersecurity measures, and performance trade-offs is missing.

Section 9 - Post-Market Monitoring

[GAP - information not available in repository. Provider must document.] No post-market monitoring plan is evidenced in the repository. The provider must document the monitoring system, risk reassessment plan, and incident reporting procedure.

Appendix A - Gaps Identified

- Provider information, hardware and software requirements, and market form.
- Foreseeable misuse and detailed profiles of affected natural persons.
- Capabilities, limitations, and detailed human oversight instructions.
- Training, validation, and test data specifications, including data provenance and quality controls.
- Detailed architectural design choices and classification rationale.
- Risk management system, including identified risks, estimation, and mitigation measures.
- Validation and testing documentation, including discriminatory bias testing and test results.
- Performance metrics including accuracy, robustness, and cybersecurity.
- Post-market monitoring system, risk reassessment plan, and incident reporting procedure.
- Provider identity, versioning, hardware dependencies, and market form are not fully evidenced in the repository.
- Affected natural-person categories, intended users, and foreseeable misuse are not fully documented in the repository.
- Human oversight procedures, escalation paths, and output interpretation guidance are not documented in the repository.
- Dataset provenance, labeling, cleaning, validation data, and data-quality controls are not documented in the repository.
- Formal architecture rationale, lifecycle change controls, and standards mapping are not fully documented in the repository.
- The Article 9 risk-management process and provider-owned control register are not

documented in the repository.

- Validation datasets, bias testing evidence, and documented test results are not present in the repository.
- Accuracy, robustness, cybersecurity, and trade-off metrics are not evidenced in the repository.
- Post-market monitoring, serious-incident reporting, and risk reassessment procedures are not documented in the repository.
